

# Install Treelets on Windows 10 Professional

## Install Docker Desktop on Windows Professional

- Create an account at Docker hub using the form <https://hub.docker.com/signup>
- Download and install the application using this tutorial: <https://docs.docker.com/docker-for-windows/install/> using default installation

## Setup Treelets from a binary distribution

- Download treelets-docker application for Windows 10 Pro TODO!!!!!!!!!!!!
- Unzip
- Run Windows PowerShell in Administrator mode and go inside treelets-docker catalog

## Run Docker

- # run in Docker Quickstart Terminal command and note ip, it will be used to open application

```
# get default ip for application
docker-machine ip default
```

- # using windows explorer go to the file treelets-docker\app\webapp\assets\config\api.json

```
# change websocketHost address to docker-machine ip default eg.
"websocketHost": "ws://192.168.99.100:4221/notifications"
```

- # run install commands:

```
# create a volume
docker volume create postgres_database
```

```
# check volumes
docker volume ls
```

```
# Build
docker-compose build
# Running
docker-compose up -d
# View instances
docker-compose ps
```

## Verify your Treelets installation

- On Windows 10 Home use the IP specified during installation: <http://192.168.99.100:8080>
